Pictures Confirm Therapeutic Success

Stubborn symptoms eliminated by the use of SANUM remedies

by Dr. med. M. Al-Haj
This journal has in the past repeatedly reported cases taken from clinical practice, in which previous extended treatments had failed to achieve any meaningful therapeutic success - until the patients finally found their way to a practice, which was experienced with and primarily used SANUM remedies. Time and again, it was noted how quickly and permanently even chronic symptoms were remitted by the proper use of these preparations - if necessary, in combination with other preparations or procedures - so that the patients could be pronounced cured often after only a few weeks.

The clinical case described here concerns a 35 years old woman, who had, for about four years, been suffering from very troublesome symptoms in the region of her eyes.

These symptoms, clearly visible to all on the face of the young woman, not only had a great negative effect on her general sense of well-being, they also threatened to drive her more and more into social isolation and loneliness. For years, the woman sought relief from various physicians and specialists, none of whose treatments - including cortisone preparations - turned out to have any lasting positive effect.

The young woman showed up for treatment at my clinic on November 9, 1995; I was able to release her on December 22 of the same year, the therapy having been fully successful. Figures 1 & 2 show the patient’s condition at the beginning of treatment and Figures 3 & 4 show her condition at the end of treatment. The changes achieved by the therapy are clearly visible. Because of its successful conclusion, the patient has refound her former psychic equanimity and has overcome her severe social inhibitions. Her manner in social situations is now relaxed and confident. After having taken the patient history, and armed with the results of special examinations, the following diagnosis was made: conjunctivitis, allergies, amalgam contamination from dental fillings. On the basis of this diagnosis, the patient’s therapy - which included removal of the amalgam filings by

a qualified dentist - was formulated. It is of course well known that many chronic complaints can be causally related to physical stress from mercury amalgam dental fillings. Damage to intestinal flora, as well as promotion of allergic tendencies, can also be a part of the picture. Therefore, the patient was prescribed the following as her individualized therapy plan:

- Intestinal cleansing for allergies (see table);
- ALKALA N powder, 1 measuring spoon dissolved in water taken in swallows throughout the day;
- MUCOKEHL eye drops, 1 drop in each eye twice daily;
- Hevertotox drops, 25 drops taken thrice daily.

In addition, the patient received autologous blood i.m. injections twice a week, in which the amount of her own blond was gradually increased from 0.5 ml to 3 ml, with the following composition: autologous blood + 1 ampoule of FORMASAN + 1 ampoule of MUCOKEHL + 1 ampoule of SELENOKEHL + 1 ampoule of Polilevo N.

As a supplement to the therapy, 15 sessions in all of needle acupuncture were administered twice weekly. The following points were used: B 12, Di 19, Di 20, LG 23, Di 11 and Di 4. The table below contains additional instructions about the therapy, specifically as concerns the use of SANUM remedies in medication based intestinal cleansing for cases involving allergies.

**Intestinal Cleansing for Allergies during an Allergy Diet Plan**

*(See the book *Ernährungsumstellung für chronisch Kranke und Allergiker* [Dietary Modification for Chronic and Allergic Patients] by Dr. K. Werthmann)*

**Theraphy recommended by Dr. med. M. Al-Haj**

**Preliminary Therapy for Infection Susceptibility**

0. **SANKOMBI** drops: 10 drops oral 1x daily before a meal for 2-3 weeks.

**Therapy with Fungal Preparations**

1. **MUCOKEHL X5** ampoules or drops: inject 1x 1 ampoule at the acupuncture point Stomach 25 bilaterally and preperitoneally or i.v. for 2 days or 2x daily 10 drops orally before meals for 2 days.
2. **FORTAKEHL 5X** tablets or drops: 1x daily 1 tablet with liquid before bedtime for 20 days, or 1x daily 10 drops orally before meals for 20 days.
3. **PEFRAKEHL X5** capsules or drops: 1x daily 1 capsule with liquid before bedtime for 2-3 months, or 1x daily 10 drops orally before meals for 2-3 months.

**Therapy with Bacterial Preparations**

The capsule preparations **UTILIN 6X** and **RECARCIN** are administered according to the following plan:

1st week: 1x 1 capsule of **UTILIN 6X** on Monday on an empty stomach without liquid.
2nd week: 1x 1 capsule of **RECARCIN** on Monday on an empty stomach with some water.
3rd week: 1x 1 capsule of **UTILIN 6X** on Monday on an empty stomach without liquid; 1x 1 capsule of **RECARCIN** on Thursday on an empty stomach with some water.
4th to 6th week: Follow instructions for 3rd week.
