

# **The causal-biological treatment of carcinomas**

**A practically proven therapy plan in outline**

**by Dr Konrad Werthmann, M.D.  
Austria**

Every occurrence of cancer arises and develops further because of a number of factors. It can be regarded as the final phase in disorder and stress which has been sustained over a period of many years. Therefore the following information and advice can count as an effective therapy only as it were as a framework for a holistic course of treatment which must always be adjusted to suit the individual. The plan given here can be extended in all directions. However, care should be taken that the patient is not overtaxed by being given too many remedies and forms of treatment.

One important measure which should be carried out at the beginning of each and every course of treatment for cancer is the cleansing of the intestine in all its functions simultaneously by administering suitable SANUKEHL preparations. In particular SANUKEHL PSEU results in a positive stimulation of the tumour necrosis factor (TNF) and an equally positive granulocyte-macrophage colony stimulation factor (GMCSF). The revitalisation of the intestine should not be limited only to the intestinal flora but must also include the intestinal mucous membrane and the villi. Both therapeutic measures, the administration of SANUKEHL and the revitalisation of the intestine, should be used in a stronger form in cases where chemotherapy and radiation therapy have been used. It is also essential to achieve the most comprehensive therapeutic care

possible for the cancer patient by encouraging him to tackle his own illness and its message to him and at the same time to feel certain about the high regard and care of his therapist.

### **Cleansing the milieu of the intestine and organs**

The first remedy of choice for this cleansing is FORTAKEHL 5X in tablet or drop form. One tablet or ten drops should be given twice daily. If the patient also has symptoms of fungal infection, EXMYKEHL is given in addition, one suppository twice daily. This combination treatment is followed after 10 days with a basic therapy of MUCOKEHL 5X, one tablet or 10 drops each morning, and NIGERSAN 5X, one tablet or 10 drops each evening. These doses of MUCOKEHL and NIGERSAN are given from Monday to Friday each week, whilst FORTAKEHL and if necessary EXMYKEHL continue to be given on Saturdays and Sundays during the basic treatment.

### **Improving resistance**

In order to strengthen the immune system of the patient, it is recommended that at the very beginning of the course of therapy SANUKEHL PSEU 6X should be administered: 10 drops twice daily, to be taken orally or rubbed into the elbow. SELENOKEHL (5 drops each morning) and ZINKOKEHL (10 drops each evening) are also given orally, with additionally THYMOKEHL

6X (one capsule or one suppository once daily). UTILIN „S“ is also recommended for the strengthening of the immune system with two capsules of the „weak“ form per month.

Important information can also be found in the Repertorium 2000 of SANUM remedies in the section on „Basic therapy for the treatment of chronic illnesses“.

### **Other necessary treatments**

In an organism which is affected by cancer, a hidden focal event often plays a decisive role in the development of a malignancy. These stressful foci are very often found in the teeth, particularly in dead roots, whether or not they have been subjected to root treatment. The bacterium *Leptotrichia buccalis* (Siphonospora according to v. Brehmer) is frequently found there, just as in the organs which are affected by tumours. Every tooth which has been subjected to root treatment must be removed, as well as every tooth with a dead root. Since all the heavy metals - particularly mercury - block important enzyme systems, all amalgam tooth fillings must be removed when the teeth and jaw are being revitalised. Scattered foci of other types in the patient's body should also be tracked down in order to revitalise or eliminate them: this can be achieved by all types of excretion of toxins, acids and waste products.

The atrophic intestinal mucous membrane of the sick person - including the Peyers' plaques

which are important for resistance - can only be restored by means of a hypoantigenic diet which is also low on animal protein in all its forms. However, at the same time this diet should be as rich as possible in all plant matter and living material, such as is to be found particularly in fresh fruit and vegetables in their natural state. Such a diet does of course require that the weakened digestive tract is still able to cope well with it. It can also be of real benefit only without the basic allergens already touched upon, as already covered in detail as topics in SANUM-Post.

Every medical person who thinks holistically knows the problems of psychic wounds or burdens in cancer patients, which are a factor for the severity and progress of the illness which should not be underestimated. It frequently happens that the patient does not only receive a psychic shock when he is informed of the diagnosis of „cancer“; it is often the case that he has already been under the burden of a psychic trauma for a long time which has robbed him of much vitality. All this requires better attention to and care of the sick person by the

therapist. Here the administration of MUCEDOKEHL 5X can be of great benefit: this, as everybody knows, influences the psychic condition via the limbic system and so is also to be used in cases of anxiety. 5 to 10 drops may be administered up to twice a day according to the severity of the condition.
